

arm PELION

Solution for MNOs who:

- + Want to engage in IoT in their region but don't have a connectivity management platform
- + Have an existing platform that has reached the limits of its technical capabilities
- + Operate a successful IoT business but struggle to meet the multi-country IoT connectivity needs of enterprise clients.

Pelion Connectivity Management

For mobile network operators

Speak to a connectivity specialist
about your business needs.

www.arm.com/pelion

Take advantage of the global IoT potential

Pelion Connectivity Management orchestrates the many technical aspects related to connectivity for IoT subscribers, from a single user interface. Enabling you to offer enterprises, OEMs and government organizations your connectivity solutions with simplified management and access to Arm's secure global footprint.

Pelion Connectivity Management

- + **Fast time to profitability**
Quickly stand up services with little investment, on a platform already managing enterprise customers in multiple industries.
- + **Ease of service delivery**
Automation across lifecycle of a connection, billing, data consumption and eUICC profile swapping.
- + **Customer satisfaction with global reach**
Provide customers with connectivity anywhere in the world, even outside the reach of your own footprint.

arm PELION

eSIM Profile Management

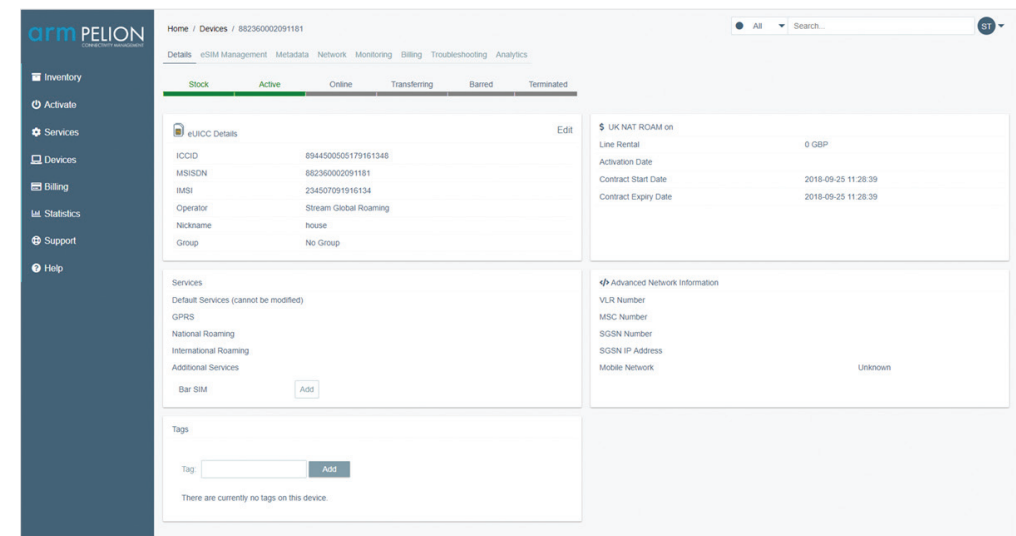

- + Flexibility to use own SMDP or hosted solution and your preferred RSP provider*
- + eSIM orchestration and interoperability ready
- + Path to iSIM and NB-IoT profiles
- + Scale IoT deployments whilst maintaining integrity of networks

Single Pane of Glass

- + Single UI to manage all functions
- + Manage all subscribers on any network over multiple technologies including LTE, 3G, 2G, eSIM, NB-IoT, LoRa and Satellite.
- + Personalize UI with own branding
- + API integration with existing business systems

Global Network Management

- + Manage a global multi-MNO inventory with consolidated order management for SIM cards and eSIM profiles
- + Access Arm's trusted ecosystem of network providers and pre-integrated partner services to extend your IoT service reach
- + Scalable multi-tenancy. Manage and customise your regional network divisions with realms, tiered access, enterprise accounts management, groups and users.

*Remote SIM provisioning (RSP) service can be delivered by a broad range of leading providers, including Arm Kigen which offers flexible, GSMA-compliant over-the-air RSP implementation.
